TESTERS' FLEX RATING 7

Found to be stiff and solid by our two approximately 12 stone testers who rode the 157 model. Stable, good edge-to-edge and with a fast base that kissed goodbye to painful traverses. Good on jumps and poppy but a bit too stiff at this size for rails. Overall solid, stable and fast.

DCMT FLEX RATING 9

High-spec, directional, all mountain warrior. The Poplar wood core stuffed with carbon stringers cuts through crud like a hot knife through butter, and the 7700 sintered base will keep you flying.

DCMT FLEX RATING 4

A good progressive all mountain board. Directional shape with Poplar wood core and a biaxial weave for a torsionally mellow flex. Carbon adds response and pop and a sintered 7700 base keeps the bubbly flowing.

DCMT FLEX RATING 4

Mellow flexing, directional, entry to intermediate level snowboard. Good for throwing around and a laid back vibe. More experienced riders will find it suited to rails and beginners will find it forgiving and easy for learning. Poplar wood core, biaxial weave, extruded base.

DCMT FLEX RATING 6

The Live Series offers a mid-flexing all terrain vehicle for riders pushing hard. A fast sintered 7700 base, Poplar wood core with triaxial weave and carbon extras for stability, response and pop. Fun to butter, solid on an edge, snappy but chatters at speed.
